Project Description

- iOS application to keep track of clothes
- Target demographics will probably be mostly females, but it's for everybody
- Users can view clothing combinations before wearing
  - Will also let friends view
- There are not many apps like this
- Similar apps have 1-2 stars

User's Point of View

- Camera will be used to store clothes within the app
- Each article of clothing will be categorized into different kinds: tops, bottoms, accessories, etc.
- Each will have at least the following fields:
  - Brand
  - Retail Price
  - Last worn
- Interface for showing/sharing with friends
  - Friends can upvote/downvote (or something similar)

Operations and Technologies Description

- Xcode 8
- Swift
- Cocoapods
- SQLite

Preliminary Development Schedule

- 02/03/17 – database setup
- 02/17/17 – push and fetch from database
- 03/17/17 – finish interface
- 03/31/17 – add "sharing" feature
- 04/14/17 – MVP complete
- 05/03/17 – additional features + cleanup; final presentation
